We can use two different styles with reStructuredText. Either, we can use the more complete syntax of `grid tables` or the easier to write, but limited in functionality, `simple tables`. An example for both is shown below:

Grid table:

Header 1	Header 2	Header 3
body row 1	column 2	column 3
body row 2	Cells may span columns.	
body row 3	Cells may span rows.	• Cells
body row 4		• contain
		• blocks.

Simple table:

Inputs		Output
A	B	A or B
False	False	False
True	False	True
False	True	True
True	True	True
